

Corporate LMS SaaS

Employee Training & Compliance Management Platform

PREPARED FOR Niharika Chhabra	PREPARED BY Arun Tyagi
DATE 08 September 2026	CONTACT 8791775933 aruntyagi.com

PROJECT VALUE INR 1,00,000 Complete development scope	DELIVERY 45-60 Days From project confirmation	CORE STACK Laravel + MySQL Responsive web SaaS
--	--	---

Project Purpose

Design and develop a multi-tenant Corporate Learning Management System (LMS) SaaS where companies subscribe to the platform, manage employees, create and assign training, track compliance, conduct assessments, issue certificates, and generate management reports from a centralized administration portal.

PROPOSAL VALIDITY: 15 DAYS

1. Executive Summary

The proposed solution is a subscription-based, multi-tenant Corporate LMS SaaS designed for companies that need a structured way to train employees, manage mandatory learning, monitor certifications, and maintain audit-ready compliance records. Each subscribed company will receive an isolated workspace with its own administrators, users, courses, assignments, reports, and settings.

The platform will be developed as a responsive web application using Laravel and MySQL. The operating model is administrator-led: company HR/L&D/admin teams manage the organization structure, upload content, build courses, assign learning, schedule classroom training, configure assessments and certificates, and monitor completion. Employees primarily access assigned learning, assessments, certificates, and their personal training history.

Business Objectives

- Provide a centralized training and compliance system for corporate and industrial organizations.
- Reduce manual HR/L&D effort through bulk actions, assignment rules, reminders, expiry tracking, and re-training automation.
- Give employees a simple learning portal for mandatory and optional training.
- Provide managers and administrators with clear completion, assessment, overdue, certificate, and compliance reporting.
- Support subscription-based SaaS operations so multiple client companies can use the same platform securely with isolated data.

Solution at a Glance

Area	Proposed Approach
SaaS Model	Multiple companies subscribe and operate in separate tenant workspaces.
Primary Users	Platform Super Admin, Company Admin/HR, Training Manager, Department Manager, Instructor and Employee.
Learning Delivery	Online courses, assessments, learning paths, classroom/offline training, certificates and recertification.
Administration	Organization structure, employee management, course creation, assignment, notifications, compliance and reporting.
Commercial Model	Development quotation: INR 1,00,000. External services and third-party usage charges are client-paid.

Commercial Scope Confirmation

This quotation includes all twenty-five functional modules listed in Section 4, together with the supporting corporate LMS workflows described in this proposal.

2. SaaS Structure, Tenancy & User Roles

Multi-Tenant SaaS Structure

The application will operate as one SaaS platform with company-level data isolation. Every company workspace will be associated with a tenant/company identifier and role-based authorization rules so users from one organization cannot access another organization's employees, courses, reports, certificates or settings.

Role	Responsibility
Platform Super Admin	Manages subscribed companies, plans, platform usage, company status, global settings and overall SaaS administration.
Company Admin / HR	Controls the company workspace, organization structure, employees, courses, learning assignments, certificates, reports and settings.
Training Manager	Creates and manages learning content, assessments, learning paths, training calendar and training operations.
Department Manager	Views assigned teams, monitors employee completion, overdue items and team-level training performance.
Instructor	Supports classroom/offline sessions, attendance and instructor-led training records where applicable.
Employee	Consumes assigned learning, completes assessments, views progress, certificates and personal training history.

Organization Hierarchy

Each company will be able to represent its operational structure using locations, departments, teams/designations, managers and employees. This structure will be used for targeted assignments, automation rules, reports and compliance views.

LEVEL 1	LEVEL 2	LEVEL 3	LEVEL 4
Company Tenant workspace	Location Office / plant / branch	Department Business function	Employee Role + manager mapping

Subscription Lifecycle

Stage	Workflow
1. Registration	Company provides organization and administrator details.
2. Plan Selection	Subscription plan and employee/user limits are selected.
3. Payment	Payment is processed through the configured payment method/provider.
4. Workspace Activation	Company workspace and administrator access are activated.

Stage	Workflow
5. Ongoing Usage	Users, courses, assignments, reports, notifications and compliance are managed inside the tenant.
6. Renewal / Grace	Renewal, grace period and suspension/read-only rules can be applied according to subscription status.

3. End-to-End Corporate LMS Workflow

The following workflow describes how the platform will operate from company onboarding through ongoing training and recertification.

#	Module	Included scope
01	Company Subscription	A corporate client registers, selects a plan and activates its organization workspace.
02	Workspace Setup	Company Admin configures locations, departments, designations, managers and permissions.
03	Employee Onboarding	Employees are added individually or through bulk import and mapped to the organization structure.
04	Course Creation	Admin creates courses, sections and lessons and uploads supported learning content.
05	Assessment & Rules	Quiz/question bank, passing score, attempts, prerequisites, completion rules and certificate rules are configured.
06	Publish & Assign	Courses or learning paths are assigned to individuals, departments, locations, roles or selected groups.
07	Notify & Learn	Employees receive notifications, access the learning portal and complete lessons in the defined sequence.
08	Evaluate	Assessment attempts, score, completion and required conditions are recorded.
09	Certify	Successful completion can generate a certificate with validity/expiry details.
10	Monitor	HR and managers track completion, overdue training, compliance, certificates and department performance.
11	Remind & Escalate	The system can trigger reminders, overdue alerts and manager escalation based on configured rules.
12	Recertify	Expiring or expired training can be re-assigned automatically for periodic compliance.

Employee Learning Journey

Assigned Course > Lesson Content > Progress Tracking > Assessment > Pass / Retry > Completion > Certificate > Training History

The employee portal is intentionally focused on learning. Administrative configuration remains with authorized company staff.

Administrator-Led Operations

- Upload or organize content in the content library and build reusable courses.
- Assign learning by employee, department, designation, location, manager group or company-wide audience.
- Configure mandatory/optional status, deadlines, passing score, attempts, sequence, completion requirements and certificate validity.
- Review live training status, overdue items, failed assessments and expiring certificates.
- Export reports for management review, compliance evidence and audit preparation.

4. Functional Scope - All Included Modules

Modules 01-13

#	Module	Included scope
01	Dashboard	Platform and company dashboards showing employee counts, course activity, assignments, completion, pending/overdue training, certificate status and key compliance indicators.
02	Companies	Create/manage subscribed organizations, company profiles, tenant status, plan mapping and workspace access.
03	Subscription & Billing	Subscription plans, monthly/annual cycle support, user/employee limits, renewal status, grace/suspension logic and payment integration readiness.
04	Users	Create and manage application users, account status, access credentials and user-to-role/company mapping.
05	Employees	Employee records, employee ID, department, designation, location, manager, joining information, status, individual add/edit and bulk import support.
06	Departments	Create and manage company departments for hierarchy, assignment targeting and reporting.
07	Locations	Manage offices, branches, plants or operational locations for user mapping, assignment and reporting.
08	Designations	Manage job titles/designations and use them for employee classification and automated learning assignment.

#	Module	Included scope
09	Courses	Create, edit, publish, archive and manage company training courses with course metadata and completion configuration.
10	Course Builder	Section/lesson based course builder supporting ordered modules, content items, assessments, completion rules and publish workflow.
11	Learning Paths	Create sequenced learning programs such as onboarding, compliance, leadership or role-based paths with prerequisite/order control.
12	Content Library	Central library for reusable video, PDF, presentation, image, text, audio, external video/link, assignment, survey and supported package content.
13	Quiz / Assessment	Assessments with multiple choice, multiple select, true/false, fill blank, short/long answer and image-based questions; score, attempts and pass rules.

Content Standards

The application will support common web learning content. SCORM/xAPI package handling can be included at application level where the selected package/runtime approach and any required external service are available; external licensing or provider charges remain client-paid.

4. Functional Scope - All Included Modules

Modules 14-25

#	Module	Included scope
14	Question Bank	Reusable question repository with course/category association and support for randomized assessment selection.
15	Course Assignment	Assign courses to individual employees, departments, locations, designations or groups with mandatory/optional status, due dates and assignment tracking.
16	Training Calendar	Calendar view for scheduled learning, deadlines and instructor-led/classroom training activities.
17	Classroom Training	Create offline/instructor-led sessions with trainer, location, date/time, participant list, attendance and completion records.
18	Certificates	Automatic certificate generation after eligible completion, certificate ID, issue date, validity/expiry, downloadable employee record and verification-ready structure.

#	Module	Included scope
19	Training Matrix	Employee-versus-training compliance matrix showing valid, pending, expiring, expired or missing training across teams/departments.
20	Reports	Course completion, employee training, department performance, assessment, overdue, compliance, certificate expiry, learning hours, manager and location reports with export capability.
21	Notifications	In-app and email notifications plus integration-ready WhatsApp/Teams/Slack channels for assignments, deadlines, overdue, failures, certificates and expiry events.
22	Automation Rules	Rule-based auto-assignment, onboarding training, role/department/location rules, reminders, escalation, certificate expiry and periodic recertification workflows.
23	Roles & Permissions	Role-based access control for Super Admin, Company Admin/HR, Training Manager, Department Manager, Instructor and Employee with permission restrictions.
24	Integrations	Integration layer/API readiness for payment gateway, email, WhatsApp, SSO, HRMS, Microsoft Teams, Slack and other approved external providers using client-supplied accounts/credentials.
25	Settings	Platform/company settings for branding, learning rules, certificates, notification preferences, subscription controls, integration configuration and general application options.

Supporting Corporate LMS Capabilities

- Mandatory and optional training configuration with deadlines and learning sequence rules.
- Course completion tracking, lesson progress, time/progress indicators and assessment attempt history.
- Certificate validity, expiry reminders and automatic re-training/recertification workflows.
- Manager visibility limited to authorized teams and company-level reporting limited to the respective tenant.
- Responsive employee portal for desktop, tablet and mobile web browsers.

5. Course, Assessment, Compliance & Certification Workflows

Course Creation Workflow

Step	Configuration
Basic Information	Course title, description, category, status, mandatory/optional flag and related metadata.

Step	Configuration
Sections & Lessons	Build structured sections and ordered lessons using supported content types.
Assessment	Attach quiz/question bank, passing score, allowed attempts and evaluation rules.
Completion Rules	Set lesson sequence, required progress/completion conditions and assessment requirement.
Certificate	Enable certificate issuance and define validity/expiry where required.
Publish	Publish course and make it available for assignment to the intended audience.

Example Course Rules

REQUIREMENT	PASSING SCORE	ATTEMPTS	VALIDITY
Mandatory Required training	80% Configurable	3 Configurable	12 Months Recertification

Compliance & Recertification

For compliance-oriented training, the system will be able to track certificate validity and employee status across mandatory courses. Configurable reminder and recertification rules can be used to reduce manual follow-up.

Trigger	System Action
Before Expiry	Generate reminders at configured intervals such as 30, 15 or 7 days before expiry.
On Expiry	Mark training/certificate as expired and surface it in compliance and training matrix views.
Reassignment	Automatically reassign the course when a configured recertification rule applies.
Escalation	Notify the employee and, where configured, the responsible manager or administrator.

Learning Path Example

New Employee Onboarding

Company Orientation > Company Policies > Workplace Safety > Cybersecurity > Role Training > Final Assessment. The learning path can enforce sequence and completion prerequisites.

6. Dashboards, Reports & Management Visibility

Reporting is designed for HR/L&D, managers and compliance teams. Data visibility will follow role permissions and tenant boundaries.

Company / HR Dashboard Indicators

EMPLOYEES	COMPLETION	OVERDUE	CERTIFICATES
Active / Inactive Workforce view	Completed % Training progress	Open Items Action required	Expiring / Expired Compliance risk

Included Report Categories

Report	Purpose
Course Completion	Completion status, assigned/started/completed, dates and progress.
Employee Training History	All learning, assessments, scores, certificates and validity by employee.
Department Performance	Completion and compliance summarized by department/team.
Assessment Report	Scores, attempts, pass/fail and assessment performance.
Compliance Report	Mandatory training status, missing training and compliance percentage.
Overdue Training	Assignments past deadline, employee and manager context.
Certificate Expiry	Valid, expiring and expired certificates with relevant dates.
Learning Hours	Training participation/time summary where trackable by activity type.
Manager-wise Report	Team training performance grouped by manager.
Location-wise Report	Training/compliance performance grouped by office/plant/location.

Training Matrix

A matrix view will allow administrators to compare employees against required training and identify valid, expiring, expired, pending or missing items quickly. This is particularly useful for industrial, manufacturing and compliance-driven organizations.

7. Technology Architecture & Development Approach

Core Technology Stack

Layer	Approach
Application Framework	Laravel - application logic, authentication, business rules, APIs, queues/jobs and administration workflows.
Database	MySQL - tenant/company data, users, courses, assignments, progress, assessments, certificates, subscriptions and reporting data.
Frontend	Responsive web interface using standard HTML/CSS/JavaScript integrated with Laravel for desktop, tablet and mobile browser access.
File Handling	Storage abstraction for local or client-selected cloud/object storage; external storage charges are excluded.
Background Jobs	Laravel scheduled tasks/queues for notifications, reminders, expiry checks and automation rules as supported by the hosting environment.
Integration Layer	API/service integration structure for approved payment, email, WhatsApp, SSO, HRMS, Teams, Slack and other providers.

Security & Data Isolation Principles

- Company-level tenant isolation and authorization checks across applicable business data.
- Role-based permissions to restrict administrative functions and employee access.
- Secure authentication, password hashing, input validation and standard Laravel security practices.
- Controlled file access and tenant-aware data queries for company-specific learning content and records.
- Activity/error logging appropriate for support and operational troubleshooting.
- Production backup, server hardening, SSL, infrastructure monitoring and disaster recovery depend on the client-selected hosting/service setup.

Application Deliverables

Deliverable	Included
Responsive Web Application	Super Admin, Company Admin/HR, management and employee-facing web interfaces.
Database & Application Code	Laravel source code and MySQL schema for the agreed scope after final payment.
Core Configuration	Role setup, tenant structure, module configuration and standard application settings.
Production Deployment	One deployment/configuration to client-provided compatible hosting/server environment.
Basic Handover	Basic technical/application handover information for operation of the delivered system.

Platform Scope

This quotation is for a responsive web SaaS. Native Android/iOS mobile applications are not included. External service accounts, commercial licenses and usage fees are not included.

8. Implementation Plan & Timeline

Estimated delivery: 45-60 days from project confirmation, availability of required client inputs, and receipt of the agreed initial payment. The schedule may be adjusted if third-party approvals, content, credentials or feedback are delayed by external parties.

Phase	Workstream	Key Activities	Target
Phase 1	Discovery & Structure	Requirements finalization, SaaS/tenant architecture, user roles, navigation, database planning and workflow confirmation.	Days 1-5
Phase 2	Core SaaS & Administration	Authentication, tenant/company management, subscription structure, organization hierarchy, users/employees, roles and settings.	Days 6-18
Phase 3	Learning Management	Courses, course builder, content library, learning paths, question bank, assessments, assignments and employee learning portal.	Days 19-35
Phase 4	Compliance & Operations	Certificates, training calendar, classroom training, training matrix, notifications, automation, expiry/recertification and reporting.	Days 36-47
Phase 5	Integrations, QA & UAT	Approved external integrations using client credentials, system testing, permission checks, workflow validation and client UAT fixes.	Days 48-55
Phase 6	Deployment & Handover	Production deployment on client-provided infrastructure, final verification and handover.	Days 56-60

Timeline Note

45-60 days is an estimated development window. Timely feedback, content, access credentials, third-party approvals and UAT responses from the client are required to maintain the planned schedule.

Client Inputs Required During Development

- Final branding assets, preferred colors and company information for the initial setup.
- Sample course content, policy documents, assessment examples and certificate wording for testing.

- Required plan structure/subscription rules and payment provider selection.
- Third-party accounts, API credentials and approvals for services such as WhatsApp, email, payment gateway, SSO or other integrations.
- Access to the production hosting/server and domain/DNS when deployment is scheduled.

9. Commercial Quotation

TOTAL DEVELOPMENT FEE INR 1,00,000 One Lakh Indian Rupees	ESTIMATED DELIVERY 45-60 Days Subject to inputs & approvals	PROJECT TYPE Corporate LMS SaaS Laravel + MySQL
---	---	---

Commercial Breakdown

Item	Quotation
Development Scope	Complete functional development described in this quotation, including all 25 modules.
Technology	Laravel application with MySQL database and responsive web interfaces.
Deployment	One production deployment to a compatible client-provided hosting/server environment.
Total Professional Fee	INR 1,00,000 (One Lakh Indian Rupees).

Proposed Payment Schedule

Milestone	Percentage	Amount
Project confirmation & development start	40%	INR 40,000
Core modules / beta milestone	30%	INR 30,000
Before final production deployment & source handover	30%	INR 30,000

Third-Party Cost Responsibility

All third-party APIs, subscriptions and external service charges are to be purchased/paid directly by the client. This includes, without limitation, hosting/server, domain, storage/CDN, paid SSL (if selected), email/SMS services, WhatsApp Business/API provider charges, payment gateway fees, video streaming/hosting, SSO/identity licenses, HRMS services, Teams/Slack-related paid plans, SCORM/xAPI commercial services, and any other external provider fees.

10. Scope Conditions, Exclusions & Responsibilities

Included in This Quotation

- Development of the Corporate LMS SaaS functionality and all modules specifically described in this proposal.
- Multi-company SaaS architecture, role-based access, administrator-led course management and employee learning workflows.
- Responsive web user interfaces for the included user roles.
- Standard testing, bug fixing during development/UAT and one production deployment to a compatible client-provided environment.
- Integration implementation for agreed providers where valid API access, credentials, documentation and approvals are supplied by the client.

Client-Paid / Not Included in Development Fee

- Hosting, VPS/cloud server, domain registration/renewal, external storage/CDN and infrastructure usage charges.
- WhatsApp API/Business Solution Provider fees, SMS charges, email delivery provider fees and other messaging costs.
- Payment gateway onboarding/transaction fees and any recurring provider charges.
- Paid third-party plugins, licenses, SSO/identity subscriptions, HRMS subscriptions, video hosting/streaming or SCORM/xAPI commercial services.
- Bulk course content creation, professional video production, instructional design, translation or data/content migration beyond agreed testing/sample setup.
- Native Android/iOS applications, unless separately quoted in writing.
- Major new features, material workflow changes or integrations requested after scope approval; these will be estimated separately.

Client Responsibilities

- Provide consolidated feedback and approvals within reasonable time to avoid project delays.
- Supply authorized content, branding, employee/sample data and policy/course materials used in the system.
- Purchase and maintain third-party accounts/services and provide valid credentials or sandbox access for integration.
- Ensure lawful use of employee data, training content and messaging channels used by the platform.
- Provide production server/domain access and maintain ongoing infrastructure after handover.

Change Management

The quoted amount is based on the functional scope documented in this proposal. Minor implementation adjustments within the agreed workflow are handled during development. Any new module, materially different workflow, redesign after approval, additional third-party integration, native mobile application, or requirement outside the stated scope will be discussed and quoted separately before implementation.

11. Acceptance & Project Confirmation

This proposal is intended to provide a clear functional and commercial understanding for development of the Corporate LMS SaaS platform. Project execution may begin once the scope, commercial terms and initial payment are confirmed.

Quotation Summary

Corporate LMS SaaS - Laravel + MySQL - All 25 modules included - Development fee INR 1,00,000 - Estimated delivery 45-60 days - Third-party APIs/services paid by the client.

Confirmation of Understanding

- The functional scope includes all 25 modules and supporting workflows described in this quotation.
- The agreed development fee is INR 1,00,000 (One Lakh Indian Rupees).
- The estimated delivery period is 45-60 days, subject to timely inputs, approvals and third-party access.
- Hosting, domain, WhatsApp/API services, payment gateway charges and all other third-party costs are paid directly by the client.
- Requirements outside the documented scope will be evaluated and quoted separately before implementation.
